

## Kuracell FACIAL CELLULAR RENOVATOR

### Introduction

The corneous layer of our skin is hundredths of a millimeter thick. It is very sophisticated and protects us against the environment, sending messages to our body. The skin can be considered a wall made of bricks (cells) and cement (lipids). Our skin works hard to build that wall: new cells are born approximately every 28 days, and multiply within the basal layer, growing as they go toward the surface where they finally die to keratinization, arranged in fifteen or twenty rows naturally detaching from our body. Our epidermis works during the day, defending itself and closing ranks against a hostile environment attacking, eroding and diminishing its responses and making us look older. During the night, our skin is released of this hard work and focuses on its renovating task. Around 6 in the morning, our skin gets to its highest level of cellular multiplying action. At the hypodermis level, connective tissues and fat cells tend to decrease. Gravity is a natural enemy to our epidermis. As our skin gets thinner and less elastic, its holding role for the fat tissues can no longer be perfectly played. A young skin is an example of a perfect combination of dermis and epidermis. However, time affects that cohesion and ideal relationship. As time passes, essential interchanges between them become harder to achieve.

Photo-aging effects become apparent in the short term. You can notice them –dehydration, withering, marks and expression lines produced by ultraviolet rays. Ultraviolet radiation will go further altering the holding fibers and the effects in the long term are density and strength loss. However, scientific research on skin treatments and Dermatology made possible for Scientists at Kuhra Vital to formulate a new alternative for topic administration: We are proud to present a new Kuracell, formulated as a powerful tool against those factors permanently attacking our skin. Could Kuhra Vital provide you with a new living component (fresh vegetal cells) for the elimination of multiple skin complaints?

The answer is yes. Multiple studies were necessary before achieving the desired results: a whole new biological concept for cleansing and preserving your skin. Kuracell, the new alternative for all of you who decided to have a younger face bursting with freshness, tone, light and strength. We are not substituting an older product with a newer one. Kuracell is a successful product now enhanced with a new treatment, Kuracell, designed for initiating a regenerative, curative effect from vegetal cells.

### Composition

Each vial (dropper included) contains 15 ml of cellular suspensions produced by a gentle extraction process, the top achievement of a search performed into the vegetal cells of

multiple origin and nutrients. All of the vitamins and oligoelements were preserved, and worked extremely carefully for 100% integrity and activity. The one thing you need to do is taking that cell and magically bring it into your skin. What are you waiting for? Enjoy this phyto-cellular compound made of 7 kinds of vegetal cellular extracts! Next we describe these extracts and you will find out how powerful and effective Kuracell is:

Fresh cells from carrot, cucumber and peach, high content of vegetal cells, Vitamin A and oligoelements with highly beneficial effects upon your skin. Since our vegetal cells of Vitamin A are not chemically or pharmaceutically processed, a doubled effect is achieved – an increase of the enzyme activity and the stimulation of cellular division (which means skin regeneration). The result is increased elasticity and a younger, smoother and soft-looking skin.

Vitamin A will normalize skin keratinization (cellular renovation) while preventing dryness. This vitamin is particularly effective for treating conditions such as psoriasis, eczema and acne. Vitamin A also improves collagen-making process and makes your skin firmer.

#### **Most important benefits**

- 1 Anti-keratinization action.
- 2 Increases skin elasticity.
- 3 Supports the thickening process at dermis and epidermis level
- 4 Normalizes dry and dehydrated skin
- 5 Repairs the skin after light-caused damages
- 6 Plays a central role in developing and preserving tissues and reducing expression lines.
- 7 Stimulates cellular division, making skin regeneration and cicatrization easier.
- 8 Extremely effective anti-oxidant and immune system booster.
- 9 Smoothes the skin out and prevents dryness.

#### **Fresh cells from kiwi and lemon**

Vegetal cells loaded with Vitamin C allow for important benefits to the skin:

Immediate moisturization of the skin; stimulation of the synthesis of collagen; activation of cutaneous metabolism and protection against free radicals. The result is a skin with increased brightness, elasticity, reduced aging-rate and a significant reduction of existing aging effects. By stimulating the synthesis of collagen, cells with Vitamin C will reduce wrinkles, increase blood supply to the surface, improve tone (which is specially valuable when summer comes to its end, your tan disappears and your skin looks sad with a yellowish color). A better blood supply means better cicatrization. The ascorbic acid plays an important role in regulating your complexion.

Studies recently published report on the combined action of Vitamin C and Vitamin E for the protection of cellular membranes. Both vitamin have been linked to:

1. Stimulation of the synthesis of collagen
2. Hydroxylation of proline and lysine in the synthesis of collagen and transformation of iron

into an amino acid.

3. Increased possibilities of reversing the thinning process of the skin.
4. Long-term protection against ultraviolet radiation (UV) (provided continuous application is done)
5. Prevention against rancid fat and free radicals formation.
6. Improved elimination of old tissue and better cicatrisation.

### **Indications**

Kuracell is a true cellular treatment. It is a vegetal cellular compound and may be used topically (a few drops) for a cellular renovation effect. Use Kuracell for changing the structure of the old, tired dermic layer and enjoying a new, revitalized one. Kuracell will trigger the fibroblastic mitosis process.

Kuracell is indicated for worn, wrinkled, withered skins. Use it also in young skins requiring tone and freshness.

### **Contraindications**

Kuracell is safely administered in most of the cases. If you suffer from acne or have a strong tendency to allergies, ask your Physician.

### **Application**

Thoroughly clean your face and neck before using Kuracell. Administer two drops as many times as required for covering these areas. Generally speaking (8) drops should be enough.

Give a soft massage until completely absorbed. Apply before going to bed.

### **Results**

Kuracell is a cellular treatment that will trigger specific biological reactions as from the first week of treatment. Renovation occurs at the sub-dermis, from inside to outside. Thirty (30) days will be necessary for a complete treatment, according to the tests performed.

### **Presentation**

Kuracell is offered in a box containing one (1) 15-ml dropper vial, designed against temperature variations. Each container of Kuracell is manufactured under sterile atmosphere with strict quality controls. All required clinical and safety tests were performed.

### **Storage**

Keep Kuracell at 5-30 °C.

### **Duration**

Kuracell is vacuum-packed. This product can be stored for (5) years without opening. Use within (30) days after opening. This is a biological product. Keep it in a cool, dry place.
