

Kycell

PATCH FOR THE EYES

Introduction

Kycell is a soothing, anti-stress composition created to eliminate wrinkles, bags and dark rings around the eyes. The fresh cells are combined with the softening properties of Euphrasia to fight the ravages of time and stress, and reduce the wrinkles and lines of the damaged, sensitive skin surrounding the eyes.

Kuhra-Vital Kycell is the combination of Euphrasia officinalis L. with the fresh cells of vegetal origin (Cucumis Sativus), which is the base of a product whose synergistic benefits are higher than those of the separate ingredients. Euphrasia is Greek for "joy", a feeling associated with the results of this largely used extract in the Middle Ages, in decoctions and compresses for treating irritated, watering eyes. The fresh cells of the Cucumber and other phyto-organic combinations have been largely used in beauty care preparations.

Composition

Euphrasia is highly known in Europe for its congestion-relief properties and as an ophthalmic anti-inflammatory ingredient.

The aerial parts of the plant are used for their concentration in flavonoids, tannins (acid euphrasiotannic) and derived glucosides.

German Pharmacopoeia includes a detailed monograph on this plant.

The fresh cells are used for their healing, soothing and refreshing properties.

The cells, made clearly visible through an electron microscope, are left intact to preserve the intracellular water and its molecular components.

The combined anti-inflammatory and softening actions induce a smoothing of the features that often deepen following physical or chemical stresses in the particularly fragile epidermis of the face, especially in the area of the eye.

Indications

Use for soothing and refreshing the area around the eyes Instant hydration action and softening of this fragile skin Swelling reduction. Continuously used, eliminates wrinkles, bags and dark rings

Clinical Studies

A 4-week clinical study was carried out for the soothing effect after consecutive applications.

Ten female adult volunteers aged 40 to 65 years with different skin-types and characteristics were included in the study.

Silicone prints were obtained through a video imaging system. The prints were obtained before treatment and after 28 days.

Wrinkles were also analyzed by determining parameters of roughness, depth of wrinkles and fine lines, general profile and length of the layout, dark rings and bags caused by water retention.

Results

The results are expressed as a percentage of variation of the values of each parameter between D1 - date of the first prints - and D28 - date of the second and last prints.

Statistical analysis involved 20 values -10 volunteers and prints taken from right and left profiles.

These results indicate a significant reduction in the average depth of the cutaneous relief, that is to say -33.7% for the most pronounced wrinkles at the beginning of the study, and -15.0% for general skin profile.

In vivo studies previously carried out on the soothing properties of the Fresh Cells (thermal sensitivity) are available on request.

The result of this study, a "notable soothing effect", show the capacity of the Fresh Cells to clearly supplement the action of Euphrasia by inhibiting low-noise inflammatory processes of sensitive or stressed skin (sun, cold, detergents and other environmental factors).

The restoration of a normal profile for the microdepressionary network, whose disorganization generally results from external stress factors, confirms the bond between the appearance of wrinkles, and " cutaneous stress ".

The skin will look smoother and less marked than it did before the treatment, thanks to the synergistic effects of cells and Euphrasia flavonoids and tannins.

Contraindications

Kycell will be well tolerated by most patients. No contraindications observed.

Directions

Take the previously product-impregnated disks out of the package.

Gently separate both disks from their place, using your fingertips.

Apply on the area under the eyes as shown.

Relax for 10 minutes.

Lift the disks out and gently spread the remaining fluid using light strokes until completely absorbed by the skin.

Kycell is an easy-to-use, fast-action product. For a more relaxing treatment, combine Kycell with our Vixel treatment.

Patches are intended for treating inflammation processes while inhibiting the matrix degradation associated with external stress affecting the sensitive skin.

In this composition, the synergy within softening, anti-inflammatory and soothing molecules will render a deep anti-wrinkle activity with extraordinary results.

Presentation

Kycell comes in a box with then (10) patches.

Kycell is manufactured under rigorous quality controls in sterile atmosphere. Clinical and safety tests are performed in accordance with the regulations governing the matter.
