

Vixel

VEGETAL BIOLOGICAL GEL

Introduction

Science provides us every day with increasing and interesting information about our skin –skin components, how it works, what it needs and how we should be taking care of it. Kuhra Vital, a line of products for Dermatologists and Cosmetic Medicine professionals, uses the most advanced organic components of animal and vegetal origin, which fight skin disorders through diverse ways. Through oligoelements, vitamins, proteins and different active compounds, carefully selected on a one-by-one basis, Kuhra products provide an extraordinary skin natural treatment and repair system.

By supplying important co-factors necessary for enzymatic and chemical reactions, the oligovitamin supplement plays a crucial role in the skin metabolism. Stress makes our skin look tired and pale -to profoundly change that, we need fortifying vitamins and minerals. Additionally, Kuhra includes active ingredients carefully selected according to their effectiveness for different skin problems, e.g. hyperseborrhea, dryness, lines and creases, irritation or hyperpigmentation.

Among the above-mentioned skin problems, eyes and lips are particularly troublesome areas. There, stress effects become obvious. The Dermabiol Institute of Kuhra Vital has created an exclusive serum-type formula called Vixel for the eyes, a treatment that appropriately preserves the skin elasticity and youth. Likewise, the outline of our lips will reveal our personality and we need to protect such delicate area against dryness, flabbiness and lost of volume. As everyone knows, eyes and lips are focal points of our face. Let us pay more attention to them!

Background

Vixel is a gel for eyes and lips, especially designed for the extremely delicate, sensitive and thin skin of said areas. Everyone can use Vixel, no matter what his or her complexion or skin type is. Eyes are particularly delicate and sensitive to the environment, physiognomy changes, and weariness caused by insomnia, sunlight, make-up, etc. All of these breaks skin balance and produce spots, bags, wrinkles, flabbiness and swelling. The exclusive formula of Vixel helps to treat such harmful effects with excellent results. Use it and see what happens after a few days.

Composition

Vixel includes water, essential oligoelements, retinoic acid, euphrabiol, horse chestnuts, hyaluronic acid, COQ10 and oligoproteins for 15 ml of product.

How it works

Vixel is a vegetable serum designed for the reduction of the depth of wrinkles and smoothing cutaneous profiles. Vixel will also eliminate eye-bags. Thanks to the different extracts, euphrasia, cucumber (euphrabiol) and horse chestnuts, along with anti-inflammatory effects, Vixel refreshes and smoothes the skin profile, reducing lines, wrinkles and swelling. This complex made of hyaluronic acid and oligoelements, supplies minerals while providing a highly moisturizing component to the tissue. Mineral pigments are included –this whitening agent eliminates dark points and hyper-pigmented areas and makes your eyes burst with light. Vixel provides a mixture of botanical extracts including powerful tyrosinase-inhibiting properties. The so-called Synerlight filters ultraviolet rays and prevents the progressive darkening of the skin. Vitamins A, E and C are also included.

The Vixel complex system is based on biological and natural synergetic principles. The ingredients reinforce each other in order to renew the natural conditions of the skin, just the way the young skin does. The ingredients of Vixel will absorb water and form a skin isolation-layer that protects against harmful elements.

Indications

Eyes contour with wrinkles, flabbiness
Eye-bags caused by liquid
Eye-bags caused by fat

Vixel is recommended for all kinds of skin. Even young people will benefit. Remember that prevention is better than cure! And undesirable effects in such extremely sensitive areas will usually appear prematurely.

Contraindications

Even though Vixel includes Factor 20 for solar protection we recommend not exposing to direct sunlight without protection. This product is hypoallergenic. No reactions observed.

Administration

Thoroughly clean the areas to be treated. Apply a small portion of the product (approximately two (02) drops for each eye) into the upper and lower part around the orbital bone, top of the nose and around lateral area of the eyes. Slightly massage the area. Do not press the area (only tap slightly for spreading the product).

Follow a similar procedure for the lips. Apply (1) drop until covering the contour of the lips. Both for eyes and lips, apply the treatment morning and night.

Clinical Research

Clinical studies were made in the Ophthalmology Division of Cröix Rousse Hospital, with

participation of the Dermatological Division. Patients from 25-75 years old were administered the gel twice (2) a day for a 3-month period.

Biopsies were performed on 10 patients and clinical research showed that Vixel provided for a repair of connective tissue; production of new elastin and growth of fresh collagen fibers. A permanent repair of the area was observed.

Results

Reduced deep lines, crow's feet, rings and bags.

Softer and firmer texture of the skin of those areas.

Quick absorption of the gel with profound penetration.

Elimination of lines and deep crow's feet. Young-looking skin.

A lifting effect of the droopy skin around the eyes. Increased resistance.

Healthy-looking eyes without rings.

A firmer, young-looking skin around the eyes.

Presentation

Vixel comes in one (1) 15-ml. vial, with a dropper-type dispenser specially designed that includes a safety seal. Vixel is manufactured under strict quality controls and several dermatological clinical tests according to the international regulations governing the matter.

Warning

Kuhra Vital guarantees the purity and quality of its products and shall not be responsible for harm caused to third parties due to bad praxis.
